Summary	Final-year MCA student with strong analytical skills and hands-on experience in data analysis, SQL querying, data preprocessing, and Python-based data manipulation. Proficient in working with structured datasets using Pandas, NumPy, MySQL, and visualization-ready data pipelines. Experienced in building data-driven applications, performing exploratory data analysis, and extracting actionable insights from datasets. Seeking a Data Analyst Intern role to support business decision-making through data-driven insights and reporting.	
Education	Master of Computer Applications(MCA), PES University	CGPA:7.2 Expected 2026
	Bachelor of Computer Applications (BCA), KLE's S Nijalingappa College	CGPA: 8.6 2024
Skills	Programming and Query Languages: Python, SQL Databases: MySQL, Relational database design, CRUD operations Libraries: Numpy,Pandas,Scikit-learn Tools & Platforms: Excel, Power BI, Jupyter Notebook, Streamlit, Git & GitHub	
Certifications	Cloud Computing Paypal	March 2024
	Data Science with Python & SQL Analoga	December 2023
Projects	Human Disease Prediction Web App - Performed data cleaning, preprocessing, and exploratory data analysis on structured healthcare datasets. - Engineered relevant features and trained predictive models achieving ~90% accuracy. - Analyzed model outputs to identify key patterns and risk indicators in health data. - Deployed insights through an interactive Streamlit dashboard for real-time predictions. - Strengthened skills in data interpretation, statistical reasoning, and result communication. https://humandiseaseprediction.streamlit.app/ Blood Donation Management System Web App - Developed a full-stack CRUD web application to manage donor and recipient records efficiently. - Designed relational database schemas and implemented SQL queries for data storage and retrieval. - Improved record management efficiency by ~30% through automation and structured workflows. - Applied clean coding practices, modular backend design, and basic validation logic.
